DADE. 1606.

A Prognostication, in
which you may behold
the state of this yeere of
our Lorde God,
1606.

Being the second from the Leap yeere.

Made and set forth by Iohn
Dade, Gentleman, Practitioner
in Physicke.

LONDON

Printed for the Comp^y
nic of Stationers.

Dade 1606.

¶ THE DISCRIPTION
of the foure Quarters of the yeere,
and first of Winter. 1606.

Sol in ♋. ♊. ♏.

Winter by Astronomieall computation, beganne the xiiij. day of December last past, at the entring of the Sunne into the first degree of Capricorne, at which time the Sunne is farthest from our Zenith, or verticall poynt, beeing the shortest day in the yeere, which Winter doth continue untill the xi. day of March next following. This quarter according to the usuall disposition thereof, is of the nature of the Water, that is, colde, & moyst, and therefore aptly compared to the flegmaticke complexion, &c. But this quarter many times as well as the rest, doth much degenerate from those particular inclinations wherunto they are properly addicted. Yet as touching this present Winter, I suppose by conjecturall probabilities, it will effect and bring forth the weather not farre vnfitting his naturall disposition, as may be seene in the daily disposition thereof.

Diseases like to invade and bere mens Bodies within this Winters resolution, are Feuers of diuers sortes, Retumes, Coughes, Catarrhes, Hoarsenesse, sore Eyes, payne in the Thighs & Knees, the Droopie, greivous Headaches, Tooth-aches, weakenesse in the Backe, griefe in the breast and Stomacke, and such other verie greivous, as well to the aged as young folkes.

B 2

Of

A Prognostication

Of the second quarter of the yeere, called the Spring.

Sol. In γ υ ιι.

The second parte of this common yeere, called the Springe which of Hyppocrates and all other Physicians, is esteemed the most whollsome and pleasant part thereof, begetteth this yeere the xi. day of Marche, the Sunne then entering into the first Point of the Equinoctiall signe Aries, so causing the Vernall Equinoctiall, and making the Artificiall day equall with the night through the whole, the Sunne then rising at six in the morning, and setting at six at night. The naturall temperature of this quarter is hotte and moyste, and therefore is accounted the fittest time in the yeere to ease diseased bodies in, and to restore health againe to those in whome it hath bene decayed, by the helpe and benefite of Physicke. As touching the condition of this present Spring. I am induced by many circumstances, so thinke, that it will not much degenerate from the proper kinde, whole state and condition may be seene in the daily disposition of the weather.

The common diseases this quarter shall not much differ from those before rehearsed in the Wynter revolution, besides Pleurisies, Ioynt ache, abstraction in the Lungs, paine in the Spynne, Frenzies, newe Agues, Crampe, Cowte, Scabbies, with suchlike.

OF

Dade, 1606.

Of the third quarter of the yeere
called Sommer,

Sol. in ♋ ♌ ♍

The Sommer season being the third parte or quarter of this yeere, 1606. taketh his beginning at the Sunnes departure from the last degree of ♊ . into the beginning of ♋ . which is the Actiual or Sommer Solstice, making the longest day & shortest night in the yeere. This part or quarter of the yeere is inclined by course to be hotte and drie. Wherefore it is compared vnto fire. At this time, doe hotte chollerike humours more abundantly raigne and rage in mans bodie, then in any other quarter of the yeere. And now by the course of the Heauens, and present condition of the Starres and Planets, I gather, that it will fall out faire vnsitting the drie course thereof, as may be seene in the daily inclination of the weather.

The sicknesses at this time are diuers, as well threatened to men as women, namely hotte burning agues, pluresies, phrenesies, hotte Apostumes, diuers paines in the head, sundrie inflammations, with some strange and newe infirmities, proceeding especially of hotte chollerike humours, whereunto many shall be vnto, and not a fewe bereft of their liues this quarter.

A Prognostication.

Of the fourth quarter of the yeere called Autumne.

Sol in ♋. m. ♏.

The fourth part or quarter of this yeer is called Autumne, or otherwise the fall of the leafe, beeing the last part of this yeere. It taketh beginning when the Sunne entreteth into ♏ being the xii. of September, the daye and night now beeing of equall length as befores in the spring, & so this quarter of Autumne shall continue vntill the xii. daye of December next ensuing, at which time the next Hyemal or common Winter quarter shall beginne to take place.

This season is naturally inclined to be colde and drye, and therefore fitly compared to the Earth: I gather by my Calculation, that this quarter for the greatest parte, will fall out reasonable kinde and naturall, beeing much disposed to calme and boisterous windes, as it commonly vseth to bee, but howe the Ayre will bee inclined throughout all this quarter, may bee scene in the daily disposition of the season.

Touching sickneses and diseases most doubtfull to afflict the body, are quartaine Agues, black Jaundize, windes about the mydriffe, Cramps, Sitches, ache in the Ioynts, Sciatica, the Gout, with other sickneses, very greeuous. Call vppon God, to extend his accustomed mercy, and graunt vs grace to encline to thankfulnessse, for hee is euermore inclined vnto mercie.

A brieve

A briefe note how the seauen Planets
are placed about the Earth in the Skie, or vn-
der the Earth, for euerie Moneth after Sunne
is downe, by which you may perceine howe they
keepe their motion Night and Day all the yeere.
Moreover the good dayes of Sympathie, tou-
ching mans Complexion and bodie in causes of
administration of Physicke, or such like: And
also the Euill dayes according to the maleuolent
aspects of Planettes, in which it is dangerous
to let Blood, take Vomits, Purgations, Sweats,
or such like attempts.

Of Ianuarie.

- 1. Is vnder the Earth at Sunne setting.
- 2. Is to bee seene nigh mid Heauen in the mornings.
- 3. And 4. goe downe with the Sunne.
- 5. Is in myddle Heauen at Sunne setting.

The first daye some small f. ll of moysture, the ii. and iii.
dayes apt to the tyme, the iiii. and v. daies colde weather, with
increase of wyndes.

First Quarter on Sunday, the vi. day, about one of the
clocke in the morning, the vi. day a Thundring noyse, the vii.
and ix. dayes, sharpe winterly weather, with pinching and

A Prognostication

freezing winde. The x. daye some change, the xi. daye flowe-
die and waivering, the xii. and xiii. dayes, apt to the time.

Full Moone on Tuesday the xiiii. day, about iiii. of the clocke
in the morning, the xiiii. and xv. dayes the winde alofte, and
plentie of moisture falleth, the xvi. day faire, the xvii. and xviii.
dayes great winde, with some fall of rayne, or other moisture,
the xix. and xx. dayes faire and seasonable.

Last Quarter on Tuesday, the xxi. day, about iiii. of the
clocke in the afternoone, the xxi. xxii. xxiii. xxiiii. xxv. xxvi.
and xxvii. dayes, variatie of winterly weather.

Full Moone on Tuesday the xxviii. day, at vii. of the
clocke, xxi. minutes in the morning, the xxviii. day some fall of
snowe, the xxix. day winde and waivering, the xxx. day faire,
the xxxi. day winde biting some moisture.
